Cerdek AI launches: an AI teacher for every SPM student

8 October 2026

Cerdek AI launches as an AI revision assistant built on the KSSM syllabus, in Chinese, English and Bahasa Melayu

SIMPANG AMPAT, PENANG, 8 October 2026 — Today we are launching Cerdek AI, an AI revision assistant built for Malaysian students preparing for SPM.

Our goal is simple: give every SPM student an AI teacher who knows the syllabus.

The idea started at home. Founder Ch'ng SK noticed that some of his son's classmates, whose families couldn't afford tuition fees, often came over to share his son's computer and join his online tuition classes. It made him believe that good, one-to-one teaching should be affordable for every student. Through an introduction, serial entrepreneur Wong Shin Chen, who has been learning about and researching AI since 2022, joined him, and together they started Cerdek AI in August 2026.

Along the way, we found that popular AI tools such as ChatGPT and Gemini often can't answer KSSM questions accurately. They were trained on different materials, they sometimes make up answers, and they don't know how real SPM papers are marked. For an SPM student, an answer that sounds right but doesn't match the syllabus can cost marks.

So we built Cerdek AI: an AI teacher grounded in the official KSSM syllabus for Form 4 and Form 5, and one that understands the SPM marking scheme (skema). Students can:

- Ask the AI tutor any question, by typing or snapping a photo
- Practise state and school trial papers online, with instant marking
- Learn from a personal mistake book that tracks what they got wrong
- Study in Chinese, English or Bahasa Melayu, and switch anytime

Cerdek AI is free to start.
